TASI Lectures on F-theory

1 Introduction F-theory [1-3] occupies a remarkable sweet spot in the landscape of geometric, large radius compactifications of string theory: It is general enough to incorporate the regime non-perturbative in the string coupling g_s while at the same time it is sufficiently well-controlled for reliable computations to be performed

Introduction to representation theory

INTRODUCTION Very roughly speaking, representation theory studies symmetry in linear spaces It is a beautiful mathematical subject which has many applications, ranging from number theory and combinatorics to geometry, probability theory, quantum mechanics and quantum field theory

Basic Model Theory - Stanford University

The bible for the model theory of first-order languages for more than twenty years now is the book Model Theory by Chang and Keisler 1990, the last edition of which has been updated The newer Hodges 1993, that carries the same title, might well rise to the same level of popularity in the near future These are the books to look for more

General Introduction to Electronic Structure Theory

Introduction of a Basis Set The Hartree-Fock equations (and other equations in quantum chemistry) are easier to solve if we write each orbital as a linear combination of fixed basis functions In Hartree-Fock this is called the Linear Combination of Atomic Orbitals Molecular Orbital (LCAO-MO) theory The basis functions are usually

A FRIENDLY INTRODUCTION TO GROUP THEORY

A FRIENDLY INTRODUCTION TO GROUP THEORY 3 A good way to check your understanding of the above definitions is to make sure you understand why the following equation is correct: $|H| = \frac{1}{n} \sum_{g \in G} |C(g)|$ (1) Definition 5: A group G is called abelian (or commutative) if $gh = hg$ for all $g, h \in G$ A group is called cyclic if it is generated by a single element, that is,
