Introduction to Python - Harvard University

- Binding a variable in Python means setting a name to hold a reference to some object
- Assignment creates references, not copies
- Names in Python do not have an intrinsic type Objects have types
- Python determines the type of the reference automatically based on the data object assigned to it

Stanford University Jay Whang and Zach Maurer Python Review

Indent level 1: function body if n <= 1: # Indent level 2: if statement body return 1 else: # Indent level 2: else statement body return fib(n-1)+fib(n-2) Language Basics Python is a strongly-typed and dynamically-typed language Strongly-typed: Interpreter always “respects” the types of each variable[1]

Python 3 - Tutorialspoint

Python is a general-purpose interpreted, interactive, object-oriented, and high-level programming language It was created by Guido van Rossum during 1985 - 1990 Like Perl, Python source code is also available under the GNU General Public License (GPL) Python is named after a TV Show called ‘Monty Python’s Flying Circus’ and not after
